

# DOES YOUR SOIL NEED A JOLT?

WAKE THINGS UP WITH SUGAR E-BOOST

**SOIL**  
Service, Inc.  
Custom Approaches to Soil Management

To boost the energy and overall health of your crop, add Sugar E-Boost to any foliar feed. It's a powerful combination that helps plants more efficiently translocate and use nutrients.

**The result? Higher yields.**

# SUGAR E-BOOST

## Test Plot Performance

In more than three years of field testing, Sugar E-Boost has proven time and again that when paired with foliar feed, the beneficial bacterial activity and overall health and yield of the crop increases. This natural liquid provides a sustained source of energy to the plant so growing crops can more efficiently translocate and use nutrients.

Sugar E-Boost doesn't freeze or crystallize, has no chlorides, and has good storage properties. It is compatible with most herbicides, insecticides, and fungicides and is safe to use on all crops.

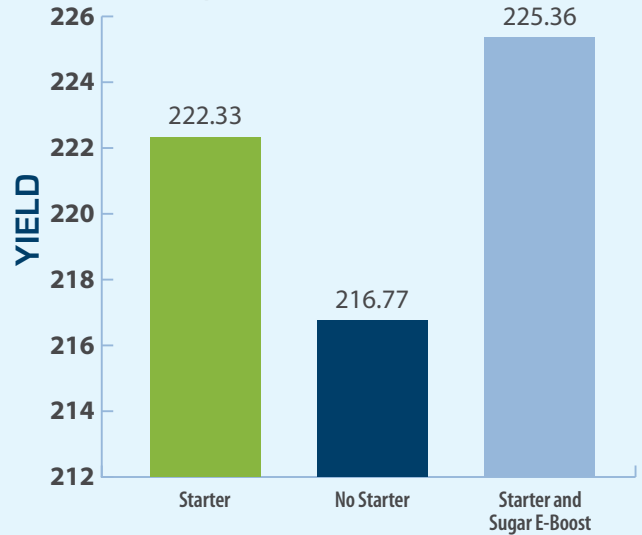

In addition to foliar feeding, Sugar E-Boost can be:

- Applied at planting
- Applied as a side-dress or transplant
- Fertigated

### 2017 SOIL Service, Inc. Research

Missouri Test Plot Program:

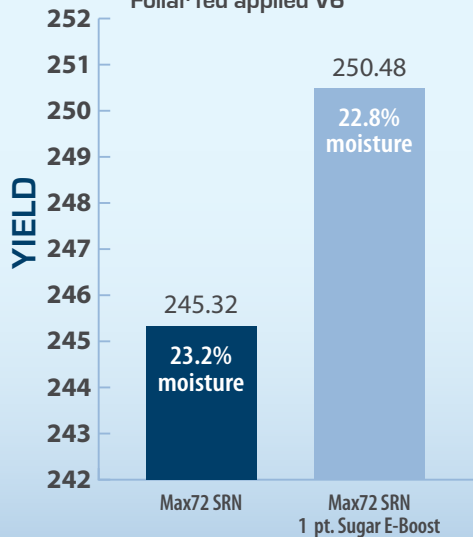

4 gal. Crop Choice® 9-1-18-1S, 1 gal. Crop Choice 0-0-30,  
1 pt. EDTA Chelated Zn-9%, 1 pt. EDTA Chelated Mn-6%,  
1 pt. EDTA Chelated Ca-3%
